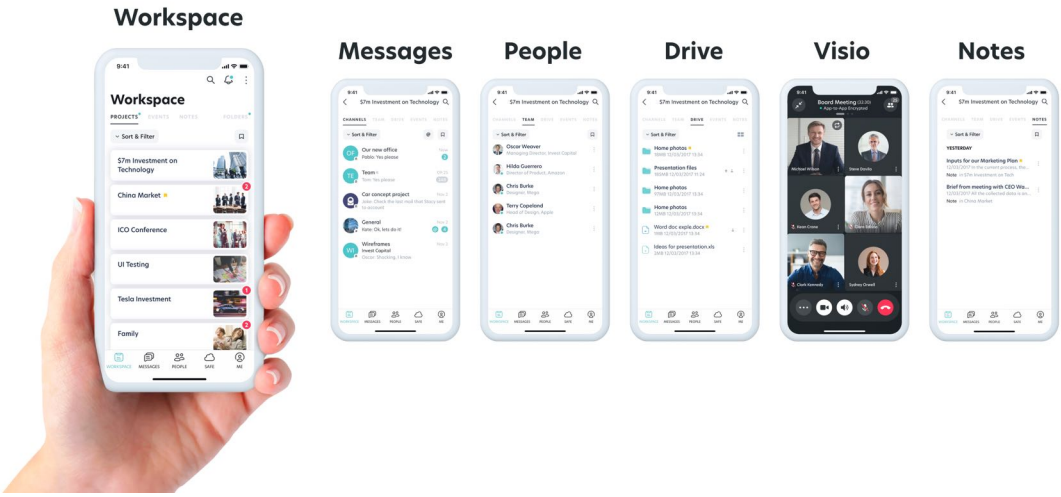
- **Messenger** & Datarooms
- **Visio Conference**
- **Drive** & External Link
- **Rights Management** (Viewer, Editor, Admin)
- **Annotations** & Notes
- **Online Co-Editing** Soon
- **One Account** & Sync Across All Devices

macOS

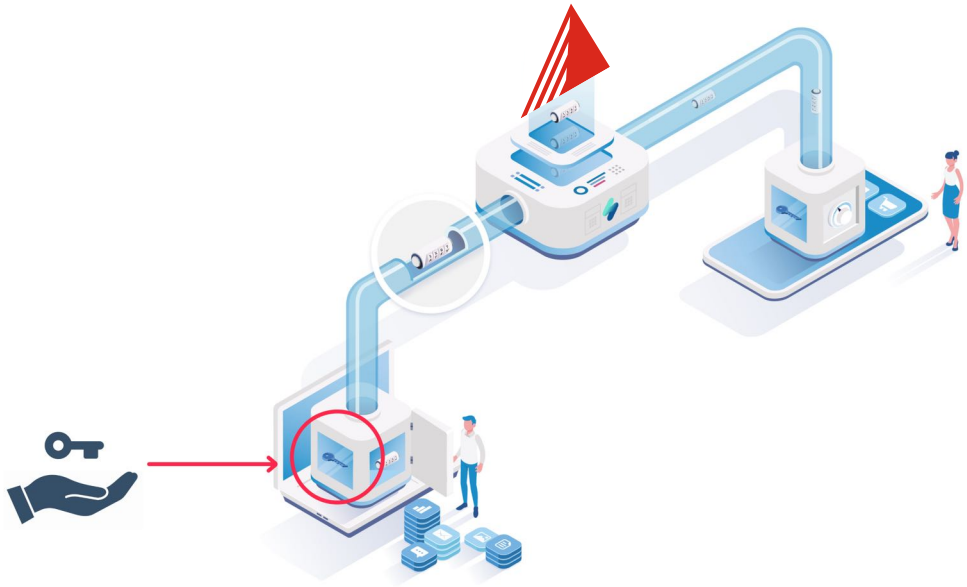


Privacy Guaranteed by Innovation

Built within a Crypto Wallet, SHAREKEY is a collaborative suite that enables the sharing of confidential information, both inside and outside an organisation, anywhere in the world.

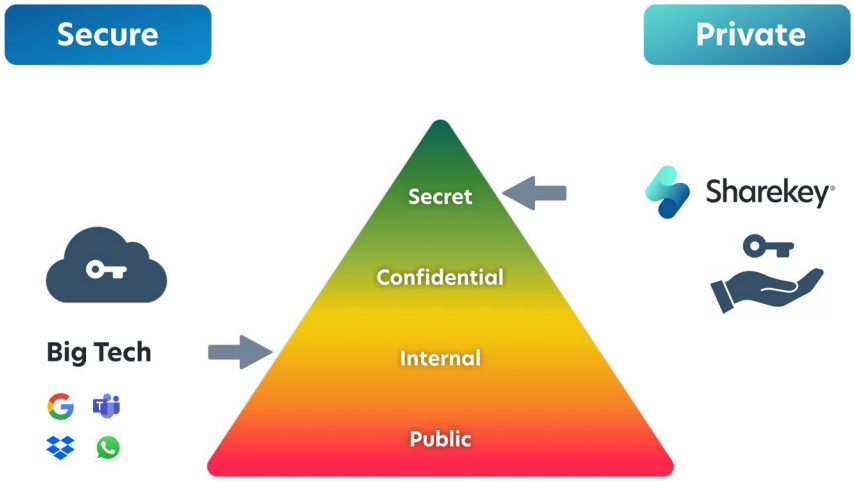
All exchanges are encrypted App-to-App with fully decentralised 256 bits keys, stored within each user's application. These keys encrypt everything in the application (Crypto Wallet) to ensure nothing is disclosed. The data is then hosted ***encrypted*** in Swiss Sovereign Cloud and redundantly stored within Swiss sovereign territory. This data remains strictly inaccessible without these keys, which are never exposed to SHAREKEY, Exoscale, or any Third Party.

App-to-App Encryption



Private vs. Secure

SHAREKEY is a Private App that allows users to keep full control of their keys and data, unlike Secure Apps which only secure data in the Cloud.



Complementary to Big Tech (WhatsApp, Teams, Google,...), the application operates in Zero Trust & Zero Knowledge mode.

Pain Points

- Cyber-attacks & Data leakage
- Economic Espionage
- Financial & Reputational damage
- Extraterritorial Laws (CLOUD Act, Patriot Act, FISA Section 702,...)
- Secure but not Private (Cloud Providers can access corporate data)

Why SHAREKEY?

- All-in-One Collaboration Suite: beautifully designed and very easy to use.
- Private: you own the key, App-to-App encryption, NO backdoor, NO metadata.
- Swiss: out of extraterritorial laws, NO CLOUD Act.
- On Invitation only for Business Elites: invite/revoke contacts.
- Any Device: one single account for all your devices.
- Any Location: works without any restrictions around the world (China, Emirates,...) including audio & video calls.
- Designed for Enterprises and CIOs, requiring minimal IT involvement.
- Green: drastically reduces carbon footprint.

Made for...

- Public & Private Companies
- Board, ExCom & DirCo Members
- Decision-Makers & Executives across all industries
- Departments: IT, Finance, Legal, HR,...

Use Cases

SHAREKEY focuses in four specific use cases:

Private Workspace

Private Collaborative Workspace for Executives (Boards, ExCom, DirCo, IT, R&D, Legal, HR,...) to share sensitive data, including with External Partners.

Crisis Management

Alternative to Big Tech, always available & never off, to communicate and access company data, when other tools are offline or hacked.

Confidential AI

SHAREKEY AI Agent, deployable in Exoscale, enabling the use of a sovereign & private AI in a confidential & secure manner.

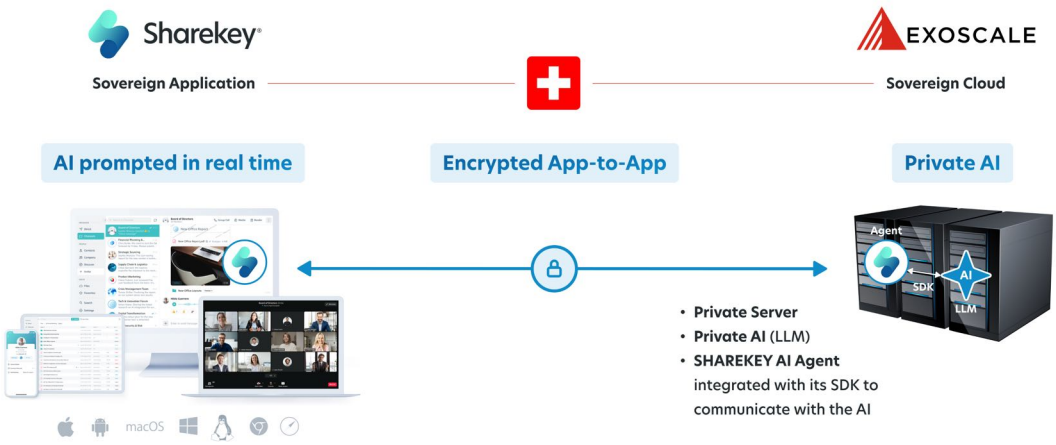
Secure Phones

Collaboration App for ultra-secure phones (*Secure Phones*), marketed by our Partners, to ensure highly sensitive communications.

Confidential AI

Integrate the SHAREKEY AI Agent with Exoscale for your most confidential use cases, which cannot be exposed to conventional AIs:

- Natural language search on your sensitive data.
- Translation, transcription, and meeting summaries, all secure.



Eco Friendly App

By design, SHAREKEY eliminates unnecessary exchanges and massive duplication of data between users and thus contributes to significantly reduce their carbon footprint:

- Files are no longer sent, only the keys are shared.
- Energy consumption of devices is therefore limited, due to the low volume of data stored.
- Datacenters are powered by 100% renewable hydroelectric energy.

Green by Design

Renewable Energy

No Profiling

Benefits & Value

- Easy to use: one single account, multiple devices, history sync.
- Liquid Business: effective collaboration inside and outside your organisation, to exchange sensitive business information with External Partners.
- Peace of mind through total control of your data, secured and kept private with your keys (256 bits).
- Carbon footprint reduced: top of mind today for everyone from Shareholders to Customers.

Powered on Exoscale Cloud

We chose **Exoscale** to provide a sovereign, high-performance, and secure Cloud, fully operated under Swiss jurisdiction.
Its local presence, state-of-the-art infrastructure, and stringent security certifications ensure true proximity for our users, along with a high level of reliability.

This deployment embodies **our shared commitment to a trusted digital ecosystem**, aligned with the highest standards of security, compliance, and confidentiality.
